

House Price Prediction using Linear Regression

Objective:

To predict house prices using Machine Learning.

Dataset:

California Housing Dataset

Tools Used:

Python

Pandas

Scikit-learn

Matplotlib

Seaborn

EDA:

Checked missing values and explored data.

Model:

Linear Regression

Evaluation Metrics:

MAE

RMSE

R^2 Score

Results:

The model predicted house prices successfully.

Conclusion:

Linear Regression produced reasonable prediction results and can be improved using advanced ML algorithms.
